Selectmen's Office, Town of Parsonsfield, Kezar Falls, ME 04047
6. All information is available from Liudas Normantas, the Coakley Landfill or Resource Analysts, Inc.
7. No prior response.

FINANCIAL/CORPORATE INFORMATION

8. Liudas Normantas  
RR1 Box 291  
Hampshire Street  
Hiram, ME 04041

The facility is located on route 113 in the town of Baldwin, Maine.

9. Facility is privately owned.
10. Not incorporated.

11. The facility consists of an incinerator and transfer station serving a population of approximately 5000 persons in five rural communities. The facility serves for disposal of solid waste for these communities. Metal, glass, demolition materials, tires, etc. are extracted prior to incineration. Only residential waste is incinerated and reduced to ash. No heavy industrial uses are served by these facilities. Light industries that are served include agricultural, textile and wood products.

12. The only liability policy held by this business is the liability insurance applied to vehicles.

13. As of the end of 1987 the total value of property, buildings and equipment owned by Liudas Normantas in the towns of Baldwin and Hiram was \$134,200. The only other significant item of value is the 1986 truck used for transport of solid waste which is valued at \$25,000. Additional details can be provided, if necessary.

#### GENERATOR/TRANSPORTER INFORMATION

14. a. All residents and businesses withing the five towns (Baldwin, Cornish, Hiram, parsonsfeld and Porter) have disposed of solid waste at this facility. Some of this material was transported to the Coakley site, either as raw household waste or as ash resulting from incineration of such waste.

b. All waste from these five towns has been mixed solid household waste. The specific nature of the material varies and cannot be determined.

c. No specific hazardous waste has been identified in this material. However, I do not deny that the waste must have included some hazardous materials that are found in household trash such as cleaning agents, insecticides, paints, etc.

d. No speicific individuals or businesses have been identified as having disposed of hazardous materials in this waste.

e. No specific dates upon which hazardous materials were transported can be identified. However from September 1, 1981, to March 17, 1984, approximately 2500 Tons of municipal waste or ash in 275 loads was transported to the site. After March of 1983, all transportation of raw household waste was suspended; only ash was transported after that date.

f. The owners of the waste that was transported are the residents and businesses of the five towns. No hazardous material has been identified in this waste.

g. The quantity of hazardous materials included in the 2500 Tons of waste and ash is unknown.

117  
h. Ash samples were collected and analyzed by Resource Analysts, Inc., Box 4778, Hampton, NH 03842 (Telephone 603-926-7777). These tests included the EPA toxicity analysis. Toxicity was well below limits established by the EPA. Copies of these test results may be requested from Resource Analysts, Inc. Listed below are results of the tests on an ash sample which was collected on March 30, 1984.

PARAMETER	method	reference	result (ug/g)
Chloride, soluble	407A	1	6,900
Chemical oxygen demand, total	508A	1	33,000
Nitrate, nitrogen, soluble	418C,419	1	<2
Total organic carbon	505	1	740
Total soluble solids	209C	1	19,000
Sulfate, soluble	426B	1	3,300
Arsenic, total	3050/304	2/1	41
Barium, total	3050/303A	2/1	700
Cadmium, total	3050/303A	2/1	15
Chromium, total	3050/303A	2/1	330
Lead, total	3050/303A	2/1	1,200
Mercury, total	7471	2	0.05
Selenium, total	3050/304	2/1	<6
Silver, total	3050/303A	2/1	5.1

Soluble components were determined on an aqueous extract. The extract was prepared by placing 1 part ash and 1 part distilled water in a rotary extractor for 1 hour. The mixture was then filtered through a glass fiber filter.

Reference for methods of analysis: 1 Standard Methods, 15<sup>th</sup> Ed.  
2 EPA 600/4-79-020

Complete details of this analysis of the ash can be obtained from Resource Analysts, Inc. Additional tests with similar results are also available.

i. Waste was disposed at the Coakley site as designated by the landfill operators. No hazardous materials were identified in the waste that was deposited.

j. No hazardous materials were identified.

k. No hazardous materials were identified.

l. No hazardous materials were identified. The five towns each paid a monthly fee for the privilege of depositing municipal waste and having that waste incinerated or transported for disposal. At the close of 1984 that fee was \$1580 per month per town. This fee also included the cost of handling and processing white goods, tires, demolition material, glass and other items which were not placed in any landfill.

119  
m. During the time stated in 14.e, the total amount paid by Liudas Normantas to the Coakley facility was \$26,028.58 for the approximately 2500 Tons of solid waste that was deposited. Payments were made by check on a monthly or bimonthly basis. Liudas Normantas had no contracts or agreements with the Town of Portsmouth, NH.

n. No hazardous materials were identified.

o. No hazardous materials were identified.

p. No hazardous materials were identified.

q. No hazardous materials were identified.

r. No permit was issued to Liudas Normantas by the City of Portsmouth.

15. No. Liudas Normantas did not arrange for disposal or treatment, or transportation for disposal or treatment, of hazardous materials to the Coakley site.

Respectfully submitted,

A handwritten signature in cursive script, appearing to read "Liudas P. Normantas", written in dark ink.
